you're doing computing wrong

all your life you've been tricked. they told you how to do computing. you've been fooled. read this blog post and i show you the way out. i am the first person to get it right. nobody before has ever tried this..

i'm sorry, this was just an exaggerated version of the typical blog post / article / life philosophy / opinion piece. i don't want this blog post to be that way. what i want to write about is my

my garden rules

probably the most influential *idea* that made it click for me was the tadi web and its *slippy mindset*: "Being slippy means you're not stuck.". thanks lu wilson!

Slippy mindset

Being sloppy means you're not stuck.

Being slippy means you're not stuck.

When you're slippy, it's easy to change plan, or rebuild something from scratch. It means you're not locked in to using a certain tool.

Being sloppy means you're not stuck.

When you're sloppy, it's easy to change plan, or rebuild something from scratch. It means you're not locked in to using a certain tool.

If something breaks, you can choose to fix it, or let it die. It's ok, because it won't take long to rebuild it from scratch.

Being slippy means you're not stuck.

When you're slippy, it's easy to change plan, or rebuild something from scratch. It means you're not locked in to using a certain tool.

If something breaks, you can choose to fix it, or let it die. It's ok, because it won't take long to rebuild it from scratch.

Frogs don't live forever! They live, they make some taddies, and then they die. The taddies grow to take their place.

Being slippy means you're not stuck.

When you're slippy, it's easy to change plan, or rebuild something from scratch. It means you're not locked in to using a certain tool.

If something breaks, you can choose to fix it, or let it die. It's ok, because it won't take long to rebuild it from scratch.

Frogs don't live forever! They live, they make some taddies, and then they die. The taddies grow to take their place.

Every time you grow back, you'll be a bit different. You might be stronger. Or you might be better equipped for your changing needs.

NO MORE IDEAS

- + ## contributing
- +
 - + you can create an issue to get invited as a maintainer of this repo.
 - + let's aim to be hierarchy free, so anyone is welcomed to change things they see fit.
 - + let's not have a bdf1, or a small group of people having the last say.
 - + let's not have hard rules to how we roll here. create a PR, or push directly to main.
 - + this project has been born out of a jam session, so let's carry that ethos into the code behind the jam.

```

10th January 2025

Before contributing to nudel, I had minimal understanding of open source collaboration. Despite coding extensively in my free time, I never felt comfortable contributing to other's repositories, fearing that my work might not be up to the repository maintainers' standards. However, nudel's community and collaboration practices completely changed that perspective. It fosters a very welcoming environment where even small contributions and changes are encouraged and valued. Whether the code is optimized or well-structured is secondary. What matters is pushing something functional and receiving constructive and actionable feedback. Watching my changes go live on the website gave me a lot of confidence and created a desire to improve and learn new things.

10th January 2025

Nudel's low barrier to entry and Jam-like approach allows everyone to be a "maintainer" immediately, encouraging contribution without the fear of failure.

Breaking something isn't catastrophic but rather a part of the process, with backups in place to mitigate issues. This freedom creates space for direct learning from more experienced contributors, while being part of a diverse, supportive community that shares the same goals. With an easy-to-understand codebase, starting a new contribution is seamless. It's this mix of collaboration, creativity, and trust that makes contributing deeply rewarding.

Death

12th January 2026

2026-01-12-pastagang-killed-the-nudel-repo.md

12th January 2026

No, not just now. Unless someone reads this post and tries to be funny, you do not need to check codeberg. This is now old news: **the repo was brought back in less than 24 hours** by pastagang using a local copy of the latest version, and nudel.cc kept running without any issues during this time. It was very easy to miss.

Hello? send

verticalSplit.html

horizontalSplit.html

pad.html

```
$: s("crow")
```

jsonPad.html

```
"hi there"|
```

about.html

gnotte/doa

Things to try

- Hit the Vertical split button in the top left
- Replace about.html with pad.html

About

Uses [BroadcastChannel](#) and way overly complex mapping for communication between all panes. So all panes get all messages, but they only listen to some.

Sauce

Most panes only listen for their "sauce" which is a unique identifier to a piece of data.

Path

Every pane gets a "path" parameter which looks like `#-1-1-0` where each dash-separated element represents the (0-indexed) child index in the layout tree. `#` is the root. So that example references the first child of the second child of the second child of the root.

Thoughts

BroadcastChannel works very well as a push-everywhere mechanism to keep many disparate ancestors up to date. However ancestors often need to request data and get an independent response, and a HTTP server would be a better fit for this request-response pattern.

Challenges

It's complicated as heck

Weirdness With Simple Static Servers

```
{
  "type": "add",
  "inputs": [
    {
      "type": "number",
      "value": 1
    },
    {
      "type": "add",
      "inputs": [
        {
          "type": "number",
          "value": 2
        },
        {
          "type": "number",
          "value": 3
        }
      ]
    }

Performance Title *

You must delete

Performance description (max. 1500 characters) *

Pastagang is a radically open, creative group of people who make live music and visuals with code. Anyone can join Pastagang, which means that anyone can join the performance. Anyone in the room can take part by having a turn on one of the laptops, or by connecting from their phone. And anyone around the world can participate by visiting Nudel, Pastagang's jamming website.

When everyone is part of same performance, the line between performer and audience member becomes blurry. It also means that *anything can happen*. Programs can crash, things can go wrong, mistakes can be made. On the other hand, it's often surprising what the wisdom of a crowd can achieve when challenged. Either way, the emphasis is not on the output of the performance. The goal is interaction and collaboration, no matter what the result is.

The performance ends with Pastagang's tool, Nudel, getting deleted from the internet.
